

Abstract

The current invention provides a system for distributing content data to user locations. The content data is preferably comprises digital video data that is available on demand form a requesting location. A system server stores user accounts and generates customized program
5 schedules for the user account based user criteria which includes user preferences. Authorized users access their accounts to modify user criteria and to select program transmissions. Preferably, a computer and a television set receive program transmissions from a system network, wherein the computer provides a logical interface between the televison set and content data transmitted over the system network.
